

SEA FORCE IX

FOR IMMEDIATE RELEASE

Sea Force IX has lead the way for ultra high end performance power yacht design and construction for the past fourteen years. Their creations leave nothing to the imagination from the keel up with the best fit and finish possible.

Sea Force IX will be bringing that same “Dedication to Excellence” to the CNC 5-axis milling business. Having been an end user of this technology and all that experience brings, it is a natural progression to move into this end of the marine business that sees a few companies monopolizing the action.

Once their 5-axis mill is fully commissioned, Sea Force IX will offer complex geometric milling for plugs to any finish desired. From the finished form, full production molds can be made by one of the most experienced lamination shops in the marine business. Limited production molds and one-off forms can also be produced for the custom and low volume builders. Going one step further, prototype parts can be made in the molds benefitting the end user with quality, proven parts and seasoned molds.

This is a natural progression for a company who has previously sub-contracted this technology with all the quality and scheduling pitfalls that brings. Sea Force IX will offer a quality product and on time delivery at a cost that is very competitive. This is important to an industry where quick new product introduction is key, especially at boat show time.

- **Proven quality work for the past fourteen years (core group has been together for over two decades)**
- **“On time” delivery**
- **Competitive pricing**
- **Diversity be it from design, to mill, to mold, to production parts**

An experienced boat builder making plugs, molds and parts. That difference makes the difference!
